# NAGA VENKATA DURGESH ANUPOJU

*Frontend Developer · React.js · TypeScript · 2+ Years*

durgesh.career7@gmail.com | +91 7569259998 | Amalapuram, Andhra Pradesh

thedurgesh.in | Github | LinkedIn

## SUMMARY

Frontend developer with 2+ years of experience building and shipping production-grade React applications at real scale — an ERP running across **80+ factories and 8,000+ workers**, an API testing platform used daily by engineering teams, and an assessment platform serving **500+ concurrent students**. Strong in TypeScript, Redux Toolkit, and the TanStack ecosystem. Comfortable owning the full frontend lifecycle — architecture, performance tuning, auth flows, and production deployment on VPS with Nginx and SSL. Also founded and runs a freelance agency (SMDigitalX) with 30+ delivered projects.

## EXPERIENCE

**Software Engineer — Frontend** · *SoilSoft Technologies, Ponnur · Remote* Feb 2024 – Present

*Joined as Frontend Intern (Feb 2024) · Converted Full-Time within 3 months based on delivery and ownership.*

**ADA Workforce Management ERP** · *adaerp.soilsoft.ai*

*React.js · TypeScript · Redux Toolkit · React Query · JWT · RBAC · MFA · Nginx · VPS · SSL*

- Architected 12+ ERP modules — HR, attendance, payroll, billing, inventory — in React, TypeScript, and Redux Toolkit, serving 8,000+ workers across 80+ factories, cutting manual workflow overhead by ~40%.
- Built the full auth layer: JWT with MFA, token refresh, and RBAC-based UI rendering — zero auth-related incidents since the system went live.
- Improved page load time by ~35% through memoization, lazy loading, code splitting, and React Query caching — keeping the UI fast on factory-floor networks.
- Built a reporting suite from scratch — Excel billing engine, payroll PDFs, MIS reports, and role-specific dashboards giving management real-time workforce visibility.

**APIGen — Automated API Testing Platform** · *apigen.soilsoft.ai*

*React · JavaScript · SignalR WebSockets · Recharts · Chart.js · RBAC*

- Built the complete frontend — test creation interface, live execution dashboards, and real-time result streaming via SignalR WebSockets — so developers see pass/fail output as tests run rather than waiting for batch results.
- Delivered analytics dashboards using Recharts and Chart.js covering API performance trends and failure rates; added OWASP-aligned security checks, multi-role access control, and protected routing throughout the UI.

**Founder & Lead Frontend Developer** · *SMDigitalX — Freelance Agency · Remote* Aug 2025 – Present

**TestVerse — Online Assessment Platform** · *testverse.vsptech.in* | *assessment.testverse.vsptech.in*

*React · TypeScript · React Query · ShadCN UI · Radix UI · JWT · Cloudflare Turnstile*

- Engineered the frontend for a multi-tenant assessment platform serving 500+ concurrent students — built session management, interval-based autosave, and anti-cheat mechanisms including heartbeat tracking and tab-switch detection to preserve exam integrity.
- Integrated Judge0-powered live code execution and automated MCQ scoring directly into the UI, eliminating a 2–3 hour manual evaluation cycle — delivered an accessible, responsive interface using ShadCN and Radix UI with full dark mode support.

**Education ERP — Multi-Branch Institutions** · *erp.velonex.in*

*React.js · TypeScript · TanStack Query · Redux Toolkit · RBAC · Lazy Loading*

- Built a modular multi-branch ERP supporting School, College, and Office institution types within a single unified application — role-based routing, lazy loading across all modules, and reusable TanStack Query hooks for consistent pagination and filtering across 70+ API endpoints.
- Engineered a scalable component library of 20+ reusable UI elements — forms, tables, modals, and data grids — reducing development time across modules and ensuring visual consistency throughout the entire application.

**Freelance — Websites & Branding**

*Figma · Adobe Illustrator · Photoshop · HTML5 · CSS3 · Tailwind CSS · WordPress*

- Delivered 30+ branding and UI projects along with 10+ production websites — started as a graphic designer in 2017, expanded into WordPress development in 2024, and moved to custom React builds in 2025. Every project owned from first brief to live deployment.

## S K I L L S

**Frontend:** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

**State & Data:** Redux Toolkit, Zustand, React Query, TanStack Query

**UI Libraries:** ShadCN UI, Radix UI, Recharts, Chart.js

**Architecture:** Component design patterns, RBAC, modular architecture, responsive design, performance optimisation

**Backend Exposure:** Python FastAPI, ASP.NET Core, PostgreSQL — fundamentals

**DevOps & Tools:** Git, GitHub, VPS deployment, Nginx, SSL/TLS, Docker (basic), CI/CD, Postman, Swagger

**Design & CMS:** Figma, Adobe Photoshop, Adobe Illustrator, WordPress, Elementor

## E D U C A T I O N

**B.Tech — Electronics & Communication Engineering** CGPA: 7.80 · April 2023

*BVC Engineering College, Odalarevu*

## A C H I E V E M E N T S

- Awarded 2 performance medals at SoilSoft for delivering critical ERP modules ahead of schedule and taking ownership well beyond the expected frontend scope.
- Shipped 4 live production systems — workforce ERP, API testing platform, assessment LMS, and education ERP — serving 100,000+ total users across industries.
- Managed all production infrastructure independently across every deployed project — VPS provisioning, Nginx, SSL/TLS — without a dedicated DevOps engineer.
- Self-taught the entire journey: graphic design (2017) → WordPress development (2024) → production React systems (2024) → agency founder (2025).
